Anjali Saumithri Devi Inturi

Software Engineer · Data Engineer · Graduate Teaching Assistant

Boston, MA · (617) 751-0712 · inturi.a@northeastern.edu · github.com/aira333 · linkedin.com/in/anjali-saumithri-devi-inturi

PROFILE

M.S. Computer Science student at Northeastern University with 2+ years of industry experience as a data engineer, a software engineering co-op, and two graduate teaching assistantships in AI. I build complete products, from accessible interfaces to tested back ends and relational databases, and I explain technical work clearly to people with any background.

EDUCATION

Northeastern University, Khoury College of Computer Sciences — Sep 2025 – Dec 2027 (Expected)

M.S. in Computer Science, Boston, MA

Coursework: Algorithms & Data Structures, Distributed Systems, Database Management Systems, Machine Learning

EXPERIENCE

Software Engineer Intern (Co-op), USTechBridge — Aug 2026 – Dec 2026

Remote, USA · Voice-first Alexa skill for visually impaired users

- Built features in Node.js on AWS Lambda with DynamoDB and AWS CDK for appointments, ride requests, shopping lists and to-dos.
- Worked across a 31-intent interaction model and an ~11,800-line modular codebase, writing voice flows that read dates, times and choices aloud so users never need a screen.
- Wrote and maintained tests in a regression suite of 7 feature suites plus dialogue, NLU-parity and edge-case runs; debugged and fixed issues from each testing round to prepare the skill for Alexa certification.
- Kept local-only turns within a <80 ms warm Lambda budget; deployed production and staging stacks from the same infrastructure code.

Data Engineer, Wipro — Dec 2024 – Aug 2025

Hyderabad, India

- Designed, built and deployed distributed data pipelines on AWS (S3, Glue, EMR) for structured and semi-structured data, with modular code designed to scale.
- Engineered a configurable PySpark validation framework with 15+ rule-based checks (nulls, formats, referential integrity), catching bad data early and reducing downstream defects.
- Designed relational schemas and optimized SQL on PostgreSQL for analytics and ML consumers; exposed core functionality through REST APIs and root-caused production issues.
- Acted as a point of contact for client and internal stakeholders, turning requirements into documented designs and explaining tradeoffs to technical and non-technical audiences.

Programmer Analyst Trainee, Wipro — Jun 2023 – Dec 2024

Hyderabad, India

- Built and maintained ETL/ELT pipelines in Python, PySpark and SQL for distributed transformation and validation of relational data.
- Learned pipeline design and troubleshooting from senior engineers, then resolved recurring issues independently through to closure.

TEACHING

Graduate Teaching Assistant, Khoury College of Computer Sciences, Northeastern University — May 2026 – Present

CS1700 Society of Minds AI (Sep 2026 – present) · CS5047 AI Trends and Tools (May – Aug 2026)

- TA for 2 courses over 2 consecutive terms; grade 80+ students' assignments and written responses against structured rubrics, re-running each spreadsheet solution to verify reported scores.
- Grade optimization assignments such as the TA-assignment problem, a constraint-and-scoring model over 50+ TAs and course sections.
- Hold 2 office hours a week and answer questions by email and course channels, explaining search, heuristics and optimization to students without a CS background.
- Write short, specific feedback on what worked and where and why points were lost.

PROJECTS

Tira: voice-first phone assistant · github.com/aira333/tira 2026

React Native, Expo, JavaScript, Supabase (PostgreSQL)

- Designed and built ~14,700 lines solo: a phone app for appointments, a spoken daily briefing, shopping lists, to-dos, rides and repeat, plus a hands-free wake word (7 voice features).
- Accessible by design: Atkinson Hyperlegible type, high contrast, screen-reader labels on every control, haptic feedback and adjustable speaking speed.
- Google sign-in and Postgres sync with row-level security; works offline. 22 automated tests (16 conversation, 6 cloud sync). Preparing for Google Play.

Adaptive LangGraph Agentic Workflow · github.com/aira333/langgraph-agentic-workflow

Python, LangGraph, Flask, REST API, PostgreSQL

- Built an agent system with self-learning memory end to end, owning the REST API design, service architecture and PostgreSQL-backed session state.

Multimodal RAG Pipeline · github.com/aira333/multimodalRAGapplication

Python, OpenAI API, FAISS, BM25, Pydantic, FastAPI

- Built document ingestion and hybrid retrieval served through FastAPI, with automated tests validating accuracy before deployment.

AI Music Recommendation System · github.com/aira333/ai_music_rec

- Took a recommendation system from written proposal to a working Python codebase over five iterations.

TECHNICAL SKILLS

Languages	Python, JavaScript/TypeScript (Node.js), SQL, HTML, CSS, Java
Front end	React, React Native / Expo, Angular basics, SVG, accessible and responsive UI design
Back end & data	FastAPI, Flask, REST APIs, PySpark, ETL/ELT, data validation and monitoring
Databases	PostgreSQL, DynamoDB, Supabase, schema design, query optimization
Cloud	AWS (Lambda, S3, Glue, EMR, DynamoDB, CDK, Bedrock)
AI / ML	LLM APIs (OpenAI, Bedrock), RAG, FAISS, LangGraph, scikit-learn, Pandas, Matplotlib, Seaborn
Practice	Git and pull requests, code review, automated testing, debugging, documentation, agile

ACHIEVEMENTS & CERTIFICATIONS

- LeetCode: 500+ problems solved, contest rating 1794, top 7% globally
- AWS AI/ML Scholarship recipient, selected from 50,000+ global applicants (2023)
- AWS Certified AI Practitioner · AWS Certified Cloud Practitioner
- Machine Learning Specialization, Stanford / DeepLearning.AI
