Anjali Saumithri Devi Inturi

(617) 751-0712 | Boston, MA | inturi.a@northeastern.edu | github.com/aira333 | linkedin.com/in/anjali-saumithri-devi-inturi

SUMMARY

M.S. Computer Science student and software engineer who builds complete products: accessible front ends, tested back ends and well-designed SQL databases. 2+ years as a data engineer at Wipro, a software engineering co-op on a voice-first Alexa skill, Graduate TA for two AI courses, and 500+ LeetCode problems solved.

EDUCATION

Northeastern University, Khoury College of Computer Sciences: M.S. in Computer Science — Sep 2025 – Dec 2027 (Expected)
Coursework: Algorithms & Data Structures, Distributed Systems, Database Management Systems, Machine Learning

TECHNICAL SKILLS

Languages: Python, JavaScript/TypeScript (Node.js), SQL, HTML, CSS
Front end: React, React Native / Expo, SVG, accessible and responsive UI design
Back end & data: FastAPI, Flask, REST APIs, PySpark, ETL/ELT, PostgreSQL, DynamoDB, Supabase, schema design, query optimization
Cloud & practice: AWS (Lambda, S3, Glue, EMR, DynamoDB, CDK, Bedrock), Git, code review, automated testing, LLM APIs (OpenAI, Bedrock)

EXPERIENCE

Software Engineer Intern (Co-op), USTechBridge — Aug 2026 – Dec 2026
Remote · Voice-first Alexa skill for visually impaired users

- Built features in Node.js on AWS Lambda with DynamoDB and AWS CDK across a 31-intent interaction model and an ~11,800-line modular codebase (appointments, rides, lists, to-dos).
- Wrote and maintained tests in a regression suite of 7 feature suites plus dialogue, NLU-parity and edge-case runs; fixed issues from each testing round to prepare for Alexa certification.
- Kept local-only turns within a <80 ms warm Lambda budget; deployed production and staging stacks from the same infrastructure code.

Graduate Teaching Assistant, Khoury College, Northeastern University — May 2026 – Present
CS1700 Society of Minds AI (Sep 2026 – now) · CS5047 AI Trends and Tools (May – Aug 2026)

- TA for 2 courses over 2 consecutive terms; grade 80+ students against structured rubrics, re-running each spreadsheet solution to verify reported scores.
- Hold 2 office hours a week explaining search, heuristics and optimization to students without a CS background; write specific feedback on where and why points were lost.

Data Engineer, Wipro, Hyderabad, India — Dec 2024 – Aug 2025

- Designed, built and deployed distributed data pipelines on AWS (S3, Glue, EMR) for structured and semi-structured data.
- Engineered a configurable PySpark validation framework with 15+ rule-based checks (nulls, formats, referential integrity), catching bad data before it reached reports.
- Designed relational schemas and optimized SQL on PostgreSQL for analytics and ML consumers; turned client requirements into documented designs.

Programmer Analyst Trainee, Wipro, Hyderabad, India — Jun 2023 – Dec 2024

- Built and maintained ETL/ELT pipelines in Python, PySpark and SQL for transforming and validating relational data at production scale.

PROJECTS

Tira: voice-first phone assistant · React Native, Expo, PostgreSQL · github.com/aira333/tira — 2026

- Designed and built ~14,700 lines solo: an accessible UI, a local dialogue engine with 7 voice features and Supabase Postgres sync with row-level security; 22 automated tests; preparing for Google Play.

LangGraph Agentic Workflow · Python, Flask, PostgreSQL · github.com/aira333/langgraph-agentic-workflow

- Built an agent system with self-learning memory end to end, owning the REST API design, service architecture and PostgreSQL-backed session state.

Multimodal RAG Pipeline · Python, FastAPI, FAISS, BM25 · github.com/aira333/multimodalRAGapplication

- Built document ingestion and hybrid retrieval served through FastAPI, with automated tests that check accuracy before deployment.

ACHIEVEMENTS & CERTIFICATIONS

LeetCode: 500+ problems, contest rating 1794, top 7% globally · AWS AI/ML Scholarship (selected from 50,000+ applicants) · AWS Certified AI Practitioner & Cloud Practitioner · Machine Learning Specialization (Stanford/DeepLearning.AI)
